

Problem-statement:

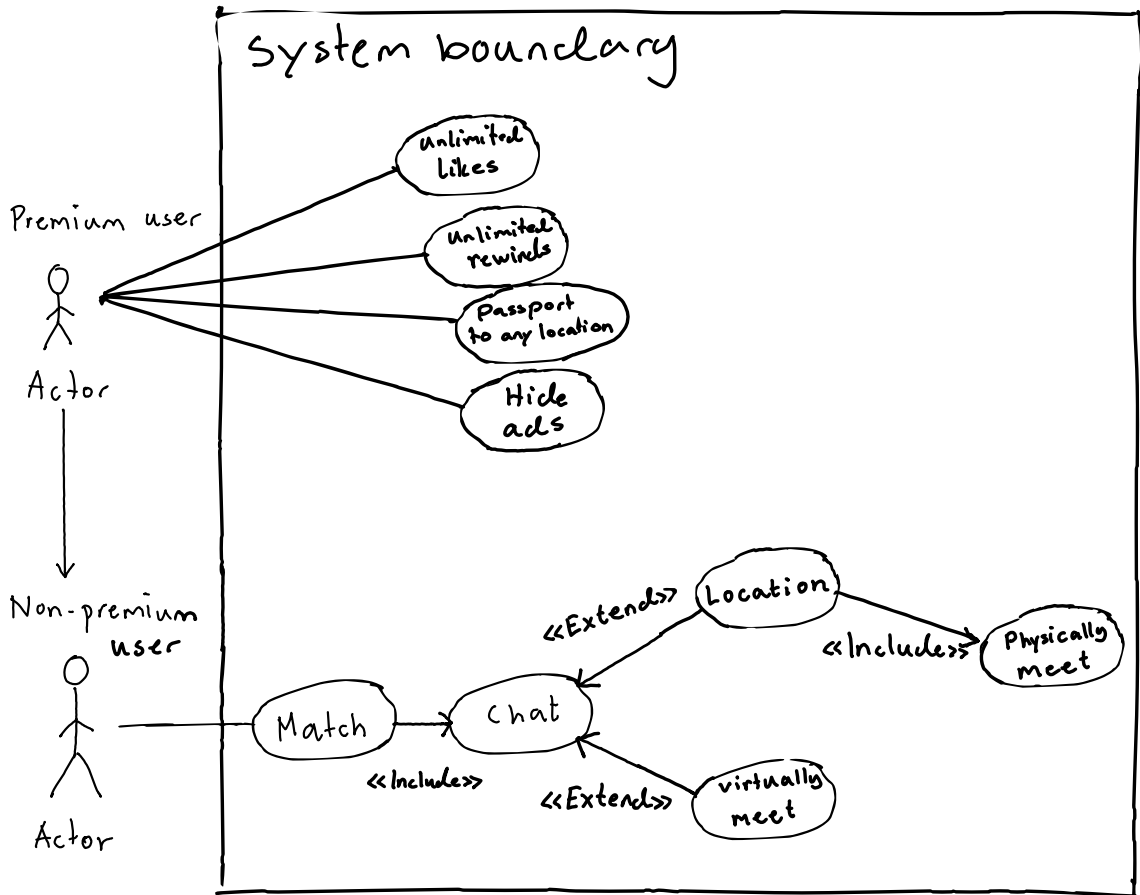

- Tinder should make it possible for people to match, chat and possibly meet with other people physically or virtually.

Actors:

- Premium user.
- Non-premium user.

Requirements:

- Non-premium members should have the ability to match, and possibly talk and meet with other persons virtually or physically.
- Premium members should have unlimited likes and rewinds.
- Premium members should have the ability to passport to any location.
- Premium members should have the ability to hide advertisements.

- if a person wants to chat they first have to match with the other person. After that they can decide if they want to meet, but if they want to meet physically they first have to decide upon a location.
